M.Sc. in FOOD TECHNOLOGY UNDER CBCS

1. Preamble

The discipline of Food Technology has transcended boundaries and has incorporated diversified subjects to make it one of the most sought after subjects to be pursued for UG/PG/ PhD degrees. Human beings are able to survive due to innovations in development of agriculture and its products. The M.Sc. programme in Food Technology is conceived with the idea of development of Human Resource for engagement in the society and food industries. The manpower generated through the programme may be engaged in the ever-increasing food industries and also for designing and development of entrepreneurial ventures.

The major objective of the programme is as follows:

- Impart theoretical and practical knowledge in the area of modern biology to enable them to work in industries, research organizations etc.
- To develop healthy citizens who are competent in their chosen fields.
- To instil confidence in the students for overall development of their professional expertise and traits.
- To instil the values of ethics and integrity.
- To enable graduates to become future leaders and innovators.

The two year degree course is for students who wish to broaden their knowledge about modern food science and technology and its relation to the development of society. Students who wish to make a change in the society and contribute to its improvement are highly welcome.

2. Introduction:

Food Technology is one of the multidisciplinary branches of Life Science, which amalgamates technology with food science to understand various food processing and their applications in human welfare. Thus, knowledge of Food Technology, helps in bridging the gap from labs to market driven research. Food Technology has its applications in almost every field, touching practically every human activity. The applied aspect of Food Technology is well established with its applications in Industry, Agriculture, Health and Environment. Food Technology requires a trained and skilled workforce to establish both the industry and research sectors. As a novel and rapidly expanding field, it demands continuous advancements in infrastructure and technology. With a strong global and local focus on developing new technological applications, the Food Technology sector in research and industry is poised to drive the next major revolution worldwide.

3. Aim of the Post Graduate Degree Programme in Food Technology:

The aim of the postgraduate degree in Food Technology is to equip students with knowledge and a thorough understanding of the fundamental concepts in the field. Students are expected to enhance their skills in handling laboratory instruments and gain insight into the principles and mechanisms underlying their operation. A well-structured teaching-learning process will facilitate the development of knowledge, understanding, and technical expertise in Food Technology. Practical skills will be acquired through

laboratory work, while presentation and articulation skills will be honed through seminars and internship experiences. Additionally, students will receive mentorship and guidance through research projects in their final year of study.

4. Career Opportunities:

Various scopes of career opportunities in Food Technology are as follows.

- Food Biochemists
- Food Microbiologists
- Food Quality Control Managers
- Food Inspector
- Nutritionists
- Dieticians
- Production Manager
- Academics

Students can also pursue higher studies such as Ph.D. programme in Food Technology or other areas in biological sciences.

DEPARTMENT OF FOOD TECHNOLOGY

VISION

To create food technologist who have strong ethics, integrity and preparedness to tackle any emerging global problem.

MISSION

- **Impart quality education to students and make them globally competitive food technologist.**
- **To incorporate confidence in the students to prepare themselves for solutions to emerging globally threatening problems.**
- **To provide state of the art academic and laboratory facilities.**

5. Post -Graduate Attributes:

Table: 7: The Learning Outcomes Descriptors and Post Graduate Attributes

Sl.no.	Post Graduate Attribute	The Learning Outcomes Descriptors <i>(The post graduates should be able to demonstrate the capability to:)</i>
PGA1	Disciplinary Knowledge	Acquire knowledge and coherent understanding of the chosen disciplinary/interdisciplinary areas of study.
PGA 2	Complex problem solving	Solve different kinds of problems in familiar and non-familiar contexts and apply the learning to real-life situations.
PGA 3	Analytical & Critical thinking	Apply analytical thought including the analysis and evaluation of policies, and practices. Able to identify relevant assumptions or implications. Identify logical flaws and gaps in the arguments of others. Analyse and synthesize data from a variety of sources, draw valid conclusions and support them with evidence and examples.
PGA 4	Creativity	Create, perform, or think in different and diverse ways about the same objects or scenarios and deal with problems and situations that do not have simple solutions. Think ‘out of the box’ and generate solutions to complex problems in unfamiliar contexts by adopting innovative, imaginative, lateral thinking, interpersonal skills, and emotional intelligence.
PGA 5	Communication Skills	Listen carefully, read texts and research papers analytically, and present complex information in a clear and concise manner to different groups/audiences. Express thoughts and ideas effectively in writing and orally and communicate with others using appropriate media.

PGA 6	Research-related skills	Develop a keen sense of observation, inquiry, and capability for asking relevant/ appropriate questions. Should acquire the ability to problematize, synthesize and articulate issues and design research proposals, define problems, formulate appropriate and relevant research questions, formulate hypotheses, test hypotheses using quantitative and qualitative data, establish hypotheses, make inferences based on the analysis and interpretation of data, and predict cause-and-effect relationships. Should develop the ability to acquire the understanding of basic research ethics and skills in practicing/doing ethics in the field/ in personal research work.
PGA 7	Collaboration	Work effectively and respectfully with diverse teams in the interests of a common cause and work efficiently as a member of a team.
PGA 8	Leadership readiness/qualities	Plan the tasks of a team or an organization, setting direction by formulating an inspiring vision and building a team that can help achieve the vision.
PGA 9	Digital and technological skills	Use ICT in a variety of learning and work situations. Access, evaluate, and use a variety of relevant information sources and use appropriate software for analysis of data.
PGA 10	Environmental awareness and action	Mitigate the effects of environmental degradation, climate change, and pollution. Should develop the technique of effective waste management, conservation of biological diversity, management of biological resources and biodiversity, forest and wildlife conservation, and sustainable development and living.

6. Programme Learning Outcomes relating to M.Sc. degree programme in Food Technology

Students post graduating with the degree M.Sc. (Food technology) will be able to achieve the following:

PLO1: Knowledge of Food Technology: Students are able to demonstrate comprehensive knowledge and understanding of one or more disciplines such as chemistry, bio-chemistry, mathematics, statistics, microbiology, engineering, management; regulations with support of different allied subjects of Life Science; Physical Science

PLO2: Develop the ability to solve complex problems Develop: Identify, formulate, review research literature, and analyze complex. Design solutions for complex problems and develop system components or processes that meet the specified needs with appropriate consideration for the food sustainability

PLO3: Develop Critical thinking and analytical reasoning ability: Recognize the need for lifelong learning and preparedness, logical reasoning, and ability to engage independently or as an entrepreneur while distinguishing and analyzing various aspects of real-life problems within the broader context of technological advancements.

PLO4: Develop the ability to create: Recognize new skills, ideas and technologies and its implementation in new product developments.

PLO5: Communication Skills: Communicate effectively, write effective reports, design documentation and make effective presentation through seminars and project dissertations

PLO6: Develop Research related skills: Acquire the practical knowledge and demonstrate the ability to design, conduct/troubleshoot experiments and analyze data in the field of food technology

PLO7: Develop the skills for collaborative work and team building: Work effectively with food industries, laboratories and production processing team to build the technical and practical learning aspects.

PLO8: Develop Leadership qualities: Work effectively with a team and building capabilities and leadership qualities for achieving the vision.

PLO9: Develop Digital and technological skills: The completion of this programme will enable the learner to use appropriate software to apply for bulk scale industrial production of technology-based food products

PLO10: Develop Environmental awareness and imbibe skills for addressing the problems: Examining the role of health consciousness, environmental awareness and intention on purchase of organic food

CREDIT DISTRIBUTION

SEMESTER	CREDITS
I	22
II	24
III	27
IV	29

TOTAL CREDITS=102

Assessment and Evaluation:

Scheme of Evaluation

The following suggestive table indicates the distribution of marks for various components in a semester

	Component of Evaluation	Marks	Frequency	Code	Weightage (%)
A	Continuous Evaluation				
i	Analysis/Class test	Combination of any two from (i) to (iv) with 10 marks each, (v) will be of 15 marks	1-3	C	45%
ii	Home Assignment		1-3	H	
iii	Project		1	P	
iv	Seminar		1-2	S	
v	Viva-Voce/Presentation		1-2	V	
vi	Midterm examination	MSE shall be of 10 marks	1-3	Q/CT	
vii	Attendance	Attendance shall be of 5 marks	100%	A	5%
B	Semester End Examination		1	SEE	50%
	Project				100%

SYLLABUS (1ST SEMESTER)

Subject Name: Food Biochemistry and Nutrition

Scheme of Evaluation: (T)

Subject Code: FTC154C101

Credit Units: 3-1-0-4

Course Objective: The course is designed to acquaint students with the chemical constituents of food, their interactions during cooking, and evaluation of taste characteristics of food

Course Outcome:

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Remember the food groups and nutrient composition, flavoured components and their sensory evaluation.	BT 1
CO 2	Understand the functions and properties of carbohydrates, RDA and various metabolic pathways.	BT 2
CO 3	Apply the basic knowledge about proteins, their structure, functions and metabolic pathways	BT 3
CO 4	Analyse the composition of fats, oil and lipids with their functions, structure, properties, deficiencies, RDA and metabolic pathways.	BT 4
CO 5	Evaluate the functions and significance of vitamins and minerals, RDA and their effects in deficiencies and excess.	BT 5

Detailed Syllabus:

Modules	Topics / Course content	Periods
I	FOOD AND ITS CONSTITUENTS: Food and Nutrients - Definition, Classification, and Functions, Role of Water in Food and Human Health, Pigments, Phytonutrients, Antioxidants, Flavour Components – Definition, Classification, and Functions, Sensory Evaluation of foods – Organoleptic Analysis, Methods and Tests of Sensory Evaluation, Organizing Sensory Evaluation, Computer-Aided Sensory Evaluations, Anti-nutritional Factors in Foods, Digestion, Absorption, and Transport of Foods and Nutrients	12
II	CARBOHYDRATES: Definition, Structure, Properties, Functions, Classification, Dietary Sources, Chemical Reactions, Deficiencies and Excess, Recommended Dietary Allowances, Metabolic Pathways - Glycolysis, Gluconeogenesis, Glycogenesis, Glycogenolysis, Citric Acid Cycle, Browning Reactions in Foods, Resistant Starches and Dietary Fibre – Definition, Sources and Functions	12
III	PROTEINS AND AMINO ACIDS: Definition, Structure, Properties, Functions, Classification, Dietary Sources, Chemical Reactions, Deficiencies and Excess, Recommended Dietary Allowances Metabolic Pathways - Transamination,	12

	Deamination, Decarboxylation, Urea Cycle, Stress and Anti-freeze Proteins; Protein Isolates and Concentrates, Denaturation of Proteins, Evaluation of Protein Quality	
IV	LIPIDS, FATS AND OILS: Definition, Structure, Properties, Functions, Classification, Dietary Sources, Chemical Reactions, Deficiencies and Excess, Recommended Dietary Allowances, Metabolic Pathways - Fatty Acid Oxidation, Biosynthesis of Fatty Acids, Synthesis and Functions of Cholesterol; Ketogenesis, Rancidity of Fats, Emulsions VITAMINS AND MINERALS: Classification, Functions, Dietary Sources, Deficiencies and Excess, Recommended Dietary Allowances	12
Total		48
Pedagogy: Lectures, Assignments, Seminars

2. Damodaran S and Parkin K. 2017. Fennema's Food Chemistry. Fifth Edition. CRC Press.
3. Lawless HT and Heymann H. 2010. Sensory Evaluation of Food. Second Edition. Springer

Subject Name: Food Preservation and Processing	Scheme of Evaluation: (T)
Subject Code: FTC154C102	Credit Units: 3-1-0-4

Course Objective: The course is designed with the following major objectives

The course is designed to understand the industrial techniques used to preserve and process foods, extend their shelf-life and improve their palatability characteristics

Course Outcomes:

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Remember the principles of Food Preservations, their importance in food industry and various traditional and industrial methods of food preservation.	BT 1
CO 2	Understanding the different techniques of Food Preservation and their significance in food industry.	BT 2
CO 3	Apply the knowledge of low temperature techniques of food preservation and the methods of non-thermal processing used for different preservation.	BT 3
CO 4	Analyse the different food processing techniques, novel food processing, their parameters, advantages and disadvantages	BT 4
CO 5	Evaluate the different food processing industry globally and their techniques used in food preservation.	BT 5

Detailed Syllabus:

Modules	Topics / Course content	Periods
I	INTRODUCTION TO FOOD PRESERVATION: Principles of Food Preservation, Water Activity and its significance in food preservation, Overview of the Traditional Methods of Food Preservation, Natural and Chemical Food Preservatives – types, permissible limits, safety aspects, Psychrometric Charts	12
II	THERMAL PRESERVATION: Blanching, Pasteurization, Sterilization, Canning, Extrusion Cooking 2.2 Baking, Roasting, Grilling 2.3 Dehydration, Concentration, Evaporation, Intermediate Moisture Foods	12
III	PRESERVATION BY THE USE OF LOW TEMPERATURES: Refrigeration, Freezing, Lyophilisation, Cryogenic Freezing, Dehydrofreezing, Freeze Concentration, IQF NON-THERMAL PRESERVATION: Microwave Processing, Hurdle Technology, Irradiation, Pulsed Electric Field Electroporation, Modified Atmosphere, Biopreservation, High-Pressure Food Preservation, Membrane	12

	Technology, Cold Plasma Technology , Enzymes and Microbes in Food Preservation	
IV	FOOD PROCESSING :Definition and Difference between Food Processing and Food Preservation; Functions, Benefits and Drawbacks of Food Processing , Primary Processing Techniques – dicing, slicing, mincing, macerating, liquefaction, emulsification, Novel Food Processing – mushrooms, algae, leaf protein concentrates, protein from petroleum yeast, food analogues, edible insects , Performance Parameters for Food Processing – hygiene, energy efficiency, minimization of waste, labour , Overview of the types of food processing industries	12
Total		48
Pedagogy: Lectures, Assignments, Seminars		

Text Books:

2. Shapton DA and Shapton NF. 1998. Principles and Practices for the Safe Processing of Foods. Butterworth-Heinemann.

Subject Name: Food Microbiology**Scheme of Evaluation: (T)****Subject Code: FTC154C103****Credit Units: 3-1-0-4****Course Objective:**

The course aims to acquaint the students with different groups of microorganisms associated with food, their activities, destruction and detection in food

Course outcomes:

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Remember the microorganisms involved in foods, their nutrient requirements, physiology with their classification for various food products.	BT 1
CO 2	Understand the process of fermentations and significance of microbial cultures in fermented products and the importance of prebiotics and probiotics.	BT 2
CO 3	Apply knowledge about various food borne infections and intoxications, their impact in human health and study about various quality control techniques.	BT 3
CO 4	Analyse ensures food safety, quality, and compliance with regulations.	BT 4
CO 5	Evaluate methods for detecting foodborne microorganisms	BT 5

Detailed Syllabus:

Modules	Topics / Course content	Periods
I	MICROORGANISMS IN FOOD: Significance of microorganisms in foods – Nutrient requirements and physiology of microorganisms; Factors influencing microbial growth, survival, and destruction; Pathogenic and beneficial microorganisms, Spoilage organisms in milk, fruits, vegetables, grains, cereals, oilseeds, meat and poultry, Spoilage of canned foods, Physical and chemical methods of controlling microbes; Thermal Death Time	12
II	FOOD FERMENTATION: Microbial cultures in food fermentation and their maintenance; Bioreactors – types and designs, Traditional fermented foods of India and other Asian countries - fermented foods based on milk, meat, and vegetables; fermented beverages, Probiotics and Prebiotics	12
III	FOOD PATHOGENS: Contamination of food, Sources of contamination, Food poisoning and microbial toxins, Use of antimicrobial chemicals: Organic acids, sugars, sodium chloride, nitrites, phosphates, sulphites, benzoates, sorbets/propionates naturally occurring antimicrobials-their mode of action.	12
IV	FOOD POISONING: Food poisoning and food-borne infections, Screening, detection and enumeration techniques including rapid detection techniques for Food Micro-organisms including pathogens. Mechanism of action of antimicrobial agents. Methodologies for detection of food borne microorganisms.	12
Total		48
Pedagogy: Lectures, Assignments, Seminars		

Text Books:

1. Adams MR, Moss MO, and McCLure P. 2016. Food Microbiology. Fourth Edition. Royal Society of Chemistry.
2. Banwart GJ.1989. Basic Food Microbiology. Second Edition. AVI Publ.
3. Microbiology, J. Willey, L. M. Sherwood, C. Woolverton, McGraw Hill International, 8th Edition, 2010

2. Early R. 2012. Guide to Quality Management Systems for the Food Industry. Blackie Academic & Professional

Course Objective:

The course is designed to appraise the students to teach technology of milling of various cereals, to impart technical knowledge on refining of oilseeds and to understand the basic composition and structure of cereals and legumes

Course Outcomes:

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Remember the nutritive value and distribution of various chemical constituents in rice grain	BT 1
CO 2	Understand the different principles, milling techniques and machineries used in wheat.	BT 2
CO 3	Apply knowledge in the industrial application of corn/maize and its products	BT 3
CO 4	Analyse on the processing methods and importance of millets in the treatment of lifestyle diseases	BT 4
CO 5	Evaluate the methods of studying quality of cereals, legumes and oilseeds with special reference to cooking quality	BT 5

Detailed Syllabus:

Modules	Topics / Course content	Periods
I	RICE: Structure, types, composition, quality characteristics and physicochemical properties of rice. Milling and parboiling of paddy, Curing and ageing of paddy and rice. Criteria in and assessment of milling, cooking, nutritional and storage qualities of raw & parboiled rice. Processed rice products (flaked, expanded and puffed rice). By-product (husk and rice bran) utilization.	9
II	WHEAT: General introduction, wheat production, wheat varieties, types and grades of Wheat. Nature of Wheat grain, structure, chemical composition and nutritive values. Milling of wheat – general principles and Machine operations. Roller flour milling Operations: -Principles and machinery operation including break system, reduction system, purification and Air fractionation of flours, etc. Flour and flour treatment; Utilization of by-products of wheat milling. Dough Rheology: Introduction, basic concepts to dough chemistry.	9
III	LEGUMES: Proximate Composition-Proteins, Carbohydrate, Lipids, Vitamins, and Minerals. Processing methods: Soaking, Germination, Decortication, Fermentation, Milling Anti-nutritional factors: Favism, Lathyrism etc. Products of processing: Grits, Nuggets, Isolates, Concentrates. Effect of processing on composition and nutritive Value. Fortification and Value-Addition of products.	9

IV	<p>CORN/MAIZE: General introduction, Corn production, types and grades of Corn. Nature of grain, structure of grain, proximate composition and Nutritive value. Dry Milling of corn; general principles and machine operations. Wet milling operation of corn; general principles and machine operations Industrial applications of corn products- corn starch and corn syrups.</p> <p>MILLETS: Types, nutritive value, value added products - Processing methods and importance in treatment of lifestyle diseases.</p> <p>OIL SEEDS: Processing of oilseeds, oil extraction methods- mechanical (ghani and expellers) and chemical methods (solvent extraction), Oil refining, processing of refined oils.</p>	9

Subject Name: Meat, Poultry, Freshwater, and Marine Food Technology **Scheme of Evaluation: (T)**
Subject Code: FTC154C105 **Credit Units: 3-1-0-4**

Course Objective:

To study about the processing of meat and preservation of meat by various techniques, To study about processing of poultry and sea foods, To provide insight into the functions and areas of responsibility of meat inspection.

Course Outcomes:

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Remember the sources of meat and meat products and its importance in India	BT 1
CO 2	Understand the factors affecting meat safety and quality and its preservative measures	BT 2
CO 3	Apply knowledge on the functional properties of eggs and its preservation by different methods	BT 3
CO 4	Analyze the post mortem changes in fish and the preservative measures of fish	BT 4
CO 5	Evaluate the different methods of slaughtering of animals in a meat processing plant	BT 5

Detailed Syllabus:

Modules	Topics / Course content	Periods
I	Meat Sources of meat and meat products in India, its importance in national economy. Chemical composition and microscopic structure of meat. Effect of feed, breed and management on meat production and quality. Stunning types and Slaughtering house operations of animals, inspection and grading of meat.	9
II	Meat Processing Factors affecting post-mortem changes. Factors affecting meat quality. Preservation of meat. Meat tenderization. Meat plant sanitation and safety. Modern abattoirs and design of facilities - typical layout and features. Microbiology & storage of meat. Meat products and it's by- products. Byproduct utilization. Packaging of meat.	9
III	Eggs Structure, composition, nutritive value and functional properties of eggs and its preservation by different methods. Processing of egg (egg powder manufacturing). Factor affecting egg quality and measures of egg quality. Packaging of eggs.	9
IV	Fish Types of fish, composition, structure, post-mortem changes in fish. Fish processing and preservation: Fish by – products – shrimp and its processing. Poultry industry in India. Classes of poultry meat. Processing of poultry. Commercial methods of slaughtering, dressing. Microbiology of poultry meat, spoilage and its control. Preservation methods of poultry meat. By products of poultry meat and	9

	Packaging of poultry products.

Subject Name: Practical I

Scheme of Evaluation:(P)

Subject Code: FTC154C116

Credit Units: 0-0-8-4

Course Objective:

The course is designed with an objective to give the students a wholesome practical skill required to prepare foods, and evaluate raw and processed foods

Course Outcomes:

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Remember the practical skills associated with Microbiology, Biochemistry, Food Processing and preservation	BT 1
CO 2	Understand isolation, screening, characterization, and identification of important microbes from various sources.	BT 2
CO 3	Apply the knowledge gained during the course in the field of research and development.	BT 3
CO 4	Analyse theoretical knowledge in developing practical solutions in solving real life problems associated with microbiology.	BT 4
CO 5	Create and understand biochemical and microbial analysis and also to develop the skill of product development	BT 5

Detailed Syllabus:

Modules	Topics / Course content	Periods
I	1. Familiarising with basic glassware and laboratory instruments 2. Safety measures to be followed while working in biochemical laboratories 3. Calculations for preparation of buffer solution, normal solution, molar solution, percent solution	12
II	1. Estimation of moisture content 2. Estimation of ash content 3. Estimation of crude fibre content 4. Estimation of fat content 5. Estimation of carbohydrates (%) content 6. Determination of energy value 7. Estimation of titratable acidity and pH	28
III	1. Application of osmotic dehydration for production of fruit candies, peeled candies and drying and packaging of vegetables (Sun drying and hot air oven drying) 2. To determine the effect of heat on sugar solution and perform the thread and cold water test 3. Use of chemical additives for preservation of jam, jellies, squashes, pickles, sauces etc	36

	4. Preparation of jam, jellies, pickles 5. Preparation of biscuit and cakes	
IV	1. Procedure of using micropipette, incubator, autoclave, laminar air flow 2. Preparation of Common Laboratory Media 3. Total plate Count (TPC) 4. Colony Forming Unit (CFU) and calculation 5. Method of Serial Dilution Technique 6. Common Plating Techniques (Streak, spread, pour plate method)	20
Total		96
Pedagogy: Lectures, Experiments, Laboratory sessions		

Texts and Reference: As suggested under theory papers

SYLLABUS (2ND SEMESTER)

Subject Name: Spices and Plantation Crop Technology

Scheme of Evaluation:(T)

Subject Code: FTC154C201

Credit Units: 3-1-0-4

Course objectives: The course is designed to acquaint students with the types of plantation crops and their processing techniques and to familiarize students with the processing of spices and condiments

Course outcomes:

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Remember the types, varieties, classification process of coffee, tea, their products, by-products and detailed study about cashew and coconut harvesting and processing methods.	BT 1
CO 2	Understand the classification and composition of spices with their production.	BT 2
CO 3	Apply knowledge about oils, powders extracted from spices with their specifications and quality standards.	BT 3
CO 4	Analyse the classification of minor and major spices with their rate of production globally and worldwide.	BT 4
CO 5	Evaluate the market scenario of spice production their manufacturing process and their utility in food industry.	BT 5

Detailed syllabus:

Modules	Topics / Course content	Periods
I	DEFINITION AND CLASSIFICATION: Coffee – Chemical Constituents, Harvesting, Bean Processing, Types and Varieties, Manufacture, Quality and Grading, Chicory Chemistry and Use , Tea - Chemical Constituents, Harvesting, Leaf Processing, Types and Varieties, Manufacture, Quality and Grading , Cocoa – Production, Composition, Grading, Processing, Cocoa Products (cocoa mass, cocoa powder, cocoa butter, cocoa-based beverages, malted beverages, cocoa liquor) , Coconut – Production, Composition, Grading, Post-Harvest Technology, Processing and Products (coconut milk, desiccated coconut) , Cashew nut Harvesting and Processing	12
II	SPICE AND CONDIMENT PROCESSING TECHNOLOGY: History of Spices and Condiments, Classification and Composition of Spices and Condiments, Fumigation and Irradiation of Spices	12

III	POST HARVEST TECHNOLOGY: Spice oils, spice powders, oleoresins, flavour components, concentrates, Plant Suspension Cultures, Enzymatic Synthesis of Flavour Identical, Quality Standards and Specifications	12
IV	MAJOR AND MINOR SPICES: Chemistry, Constituents, Nutritive Value, and Functional Benefits of the following: Pepper, Cardamom, Ginger, Red and Green Chilli, Turmeric, Cumin, Coriander, Cinnamon, Fenugreek, Garlic, Nutmeg, Clove, Mint, Vanilla, Herbs and Greens	12
Total		48

Text Books:

1. Branen AL, Davidson PM and Salminen S. 2001. Food Additives. Second Edition. Marcel Dekker.
2. Branen AL, Davidson PM and Salminen S. 1990. Food Additives. Marcel Dekker.
3. Condon JM. 1988. Food Toxicology - Principles & Concepts. Marcel Dekker.

Reference Books:

1. Shabbir S. 2007. Food Borne Diseases. Humana Press.
2. Stephen AM. (Ed.). 2006. Food Polysaccharides and Their Applications. Marcel Dekker.

Course Objectives:

This course aims to introduce students to the principles, instrumentation, and applications of various analytical instruments used in food analysis.

Course outcome:

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Remember the rules and regulations and importance of different analytical techniques in food analysis	BT 1
CO 2	Understand the principles and methodology involved in analytical techniques	BT 2
CO 3	Apply the different instrument needed in the industry for analysis	BT 3
CO 4	Analyse the instrumentation and sensors used in food industry	BT 4
CO 5	Evaluate the analytical data generated with different instruments and rapid analytical methods	BT 5

Detailed Syllabus:

Modules	Topics / Course content	Periods
I	Concepts of food analysis Rules and regulations of food analysis; Principles and methodology involved in analysis of foods: Rheological analysis, textural profile analysis of foods; Methods of analysis: Proximate constituents, moisture, adulterations, minerals analysis;	12
II	Principles and methodology involved in analytical techniques: Ion selective electrodes, spectroscopy, ultraviolet visible, fluorescence, infrared spectroscopy, atomic absorption and emission, mass spectroscopy, nuclear magnetic resonance and electron spin resonance; Chromatography: Adsorption, column, partition, gel-filtration, affinity, ion-exchange, size-exclusion method, high performance liquid chromatography; Separation techniques: Dialysis, electrophoresis, sedimentation, ultra-filtration, ultracentrifugation, iso-electric focusing, isotopic techniques, manometric techniques; Immuno assay techniques in food analysis;	12

III	Evaluation of analytical data: Accuracy and precision, statistical significance, co-relations regression, result interpretation; Instrumentation and sensors for the food industry; Food compositional analysis using near infrared absorption technology: Principles of measurement, instrumentation, applications in the food industry, power of process monitoring and trending, practical considerations for implementing on-line measurement, practical aspects of infra-red remote thermometry, radiation thermometers, Measurement principles, miscellaneous techniques; In-line and off-line FTIR measurements, calibration and general aspects of routine use;	12
IV	Rapid analytical methods and sensors: Overview, Conductance/impedance techniques for microbial assay; chemo-sensors, biosensors; Sensors for food flavour and freshness: Introduction to flavour assessment, modelling the human nose, electronic noses, tongues and testers, chemical marker approach, Chemically sensitive semiconductor devices: Solid-state sensors for pH, acidity, ions, gases and volatiles; amperometric, potentiometric and thermometric biosensors; Acoustic sensors, optical immune-sensors; Fluorescence sensor systems; Novel sensing receptors, sensor arrays, commercial biosensors.	12

Text books:

1. S. Suzanne Nieisen. 2010. Food Analysis Laboratory Manual, 2nd Ed. Springer, NY, USA.
2. Wetzel, D.L. and Charalambous, G. eds., 1998. Instrumental methods in food and beverage analysis (Vol. 39). Elsevier.
3. SemihÖtles. 2009. Handbook of Food Analysis Instruments. CRC Press, Boca Raton,FL, USA.

Reference Books:

1. Da-Wen Sun. 2008. Modern Techniques for Food Authentication. Elsevier Inc., Burlington, MA, USA.
2. S. Suzanne Nieisen. 2003. Food Analysis, 3rd Ed. Kluwer Academic, New York, USA.

Course Objective:

The objective is to introduce the principles and methods of Food Quality Control and Assurance, principles and selection of panelists for sensory evaluation and Quality Management System and existing food Standards (ISO).

Course Outcome:

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Remember the different types of contamination in food and their harmful effects and their control measures	BT 1
CO 2	Understand the principles and methods of Quality Control and Assurance in foods,	BT 2
CO 3	Apply and understand the principles of HACCP in different food processing.	BT 3
CO 4	Analyse the principles of sensory evaluation (Skills) that are carried out in a food industry	BT 4
CO 5	Evaluate a newly developed product, identify hazards and critical control points of different existing production processes	BT 5

Detailed Syllabus:

Modules	Topics / Course content	Periods
I	Introduction to food safety Introduction to food safety: Definition of food safety, food safety issues, factors affecting food safety. Safe food and importance of safe food Food Contamination; Types of food contamination, harmful effects and control. Food adulteration: Definition, common adulterated foods and harmful effects of adulterants Risk analysis- An introduction to risk analysis, risk assessment, risk management, risk communication	9
II	Concepts of QC, QA & Quality Management Concept of quality: Quality attributes- physical, chemical, nutritional, microbial. Quality control and Quality assurance- Objectives, importance and functions. Total Quality Management. Pre-requisite programmes- good hygienic practices, good manufacturing practices Hazard analysis critical control point: Definition, principles, development and application	9
III	Global and domestic Food Safety Standards ISO 22000:2005-Food safety management system ISO 9001:2000-Quality management system Global scenario- codex alimentarius commission (CAC) Auditing	9

	Domestic accrediting organisations: FSSAI, AGMARK, BIS	
IV	Quality Control: Sensory analysis: Introduction, general testing conditions, Requirements of sensory laboratory, factors influencing sensory measurements. Sensory quality parameters – selection of sensory panellists. Sensory evaluation tests- Subjective and objective test of sensory parameters. Flavor profile tests; Statistical analysis of sensory data	9

2. Jellinek G. 1985. Sensory Evaluation of Food - Theory and Practice. Ellis Horwood.
3. Krammer A & Twigg BA.1973. Quality Control in Food Industry. Vol. I, II. AVI Publ.
4. Macrae R, Roloson R & Sadlu MJ. 1994. Encyclopedia of Food Science & Technology & Nutrition. Vol. XVI. Academic Press.

Subject Name: Practical II
Subject Code: FTC154C214

Scheme of Evaluation: (P)
Credit Units: 0-0-8-4

Course Objective:

The course is designed with an objective to familiarize students with elementary analytical methods required to determine the quality of agricultural produce, to acquaint students with rudimentary processing of pulses and oilseeds, To acquaint students with types and grades of meat, poultry, and sea foods, To familiarize students with processing techniques used for the production of commercial meat, poultry, and sea foods

Course Outcomes:

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Remember physicochemical tests for quality of cereals, legumes and oilseeds	BT 1
CO 2	Understand the ante mortem handling of livestock	BT 2
CO 3	Apply knowledge on microbiology and safety of livestock	BT 3
CO 4	Analyse the different Poultry Food Products – mince, salami, sausages, egg powder	BT 4
CO 5	Evaluate the Muscle Structure, Composition, Nutritional Value, Processing Operations, Colours and Flavours – fleshy fish and shell fish	BT 5

Detailed Syllabus:

Modules	Topics / Course content	Periods
I	1. Market Survey on Cereals, Legumes, Minor Millets, Oilseeds and their Products 2. Physicochemical Tests for Quality of Cereals, Legumes, and Oilseeds 3. Determination of Amylose in Rice 4. Extraction of Gluten from Cereals 5. Development of Simulated Milk and Milk Products from Soy 6. Preparation of Extruded Products from Pulses 7. Preparation of Peanut Butter	24
II	1. Muscle Structure, Meat Composition, Nutritional Value, Slaughtering and Post-Mortem Chemistry, Colours and Flavours of Livestock – buffaloes, sheep, goat, pigs, rabbits 2. Ante-Mortem Handling of Livestock 3. Microbiology and Safety of Livestock 4. Grading of Livestock and Quality of Meat 5. Storage and Preservation of Meat 6. Meat and Processed Meat Products – pickling, canning, drying, curing, smoking, kebabs, mince, salami, sausages, corned, intermediate moisture and dried meat products 7 Dressing of Meat – offal handling and inspection 8 By-product Utilization	24

III	1. Preparation of Non-Carbonated Beverages 2. Preparation and Evaluation of Wine 3. Estimation of Sulphur Dioxide in Beverages 4. Estimation of Ascorbic Acid Content of Commercial Juices	24
IV	1. Estimation of Phenolic Content in Beverages 2. Analysis of Mineral Content of Bottled Water 3. Analysis of Nutrient Content in Sports Drinks	24
Total		64
Pedagogy: Lectures, Experiments, Laboratory sessions		

- Texts: As suggested under the theory papers.

SYLLABUS (3rd SEMESTER)

Subject Name: FOOD PLANT DESIGN AND LAYOUT

Scheme of Evaluation:(T)

Subject Code: FTC154D301

Credit Units: 3-1-0-4

Course objectives: The course is designed to understand the principles of plant design, develop expertise in plant location & layout, optimize process scheduling & equipment selection, implement effective maintenance & hygiene practices

Course outcomes:

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Remember considering plant design and layout.	BT 1
CO 2	Understand the different plant layout models and their applications in food and dairy industries.	BT 2
CO 3	Apply knowledge about plant location, levels of plant location, location of layout	BT 3
CO 4	Analyze the common problems in plant layout and process scheduling	BT 4
CO 5	Evaluate the office layout, line balancing & flexibility, common problems in plant layout and process scheduling	BT 5

Detailed syllabus:

Modules	Topics / Course content	Periods
I	Overall Design of an Enterprise: Plant design, sales planning for plant design, Strength of material – engineering materials, material science, use of various metals, including plastic, glass, etc in food industry, selection and specification – material design, concepts and manufacturing of various equipment and machineries for food processing plant	12
II	Plant Location & Layout Design: levels of Plant location, Location of layout: location factors, plant site selection, Location Theory and models, industrial buildings and grounds, Classification of Dairy and Food Plants, farm level collection and chilling centre, space requirement	12
III	Preparation of a Plant Layout: Plant Layout problem, importance, objectives, classical types of layouts. Evaluation of Plant Layout, Advantages of good layout. Organizing for Plant Layout, Data forms Common Problems in Plant Layout and Process scheduling, Sitting of Process sections	12
IV	Plant Maintenance & Hygiene Management: Evaluation, Scheduling & Equipment Selection: Sitting of Process sections, Equipment selection and capacity determination Equipment selection and capacity determination, Arrangement of process, and service equipment, Estimation of Services and Utilities Office layout,	12

	line balancing, Flexibility, Practical Layouts, Maintenance of Food Plant Building, Illumination and ventilation, Cleaning and sanitization, painting and colour coding, Fly and insect control	
Total		48

Text Books:

1. James M.Moore (1971) Plant Layout and Design Mac Millan, New York
2. Sean Moran (2015) Applied guide to process and plant design, Elsevier
3. H.S. Hall (1968) Milk Plant Layout FAO Pub., Rome

Reference Books:

- 1.Chandrashekar Hiregoudar (2017) Facility Planning and Layout Design Technical Publications
2. Richard Muther (1955) Practical Plant Layout, McGraw Hill

Subject Name: Research Methodology and Statistics

Scheme of Evaluation:(T)

Subject Code: FTC154C302

Credit Units: 3-1-0-4

Course Objective: The course is designed with the following major objectives

The course aims to give a holistic knowledge with the principles and methods of scientific research and to familiarize students with statistical methods for data analysis

Course Outcomes:

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Remember the steps and sampling methods of research design and various methods of data design.	BT 1
CO 2	Understand the graphical representation of research methods and scientific report writing	BT 2
CO 3	Apply knowledge about probability and distribution factors.	BT 3
CO 4	Analyse the measures of central tendency (mean, mode) for grouped and ungrouped data.	BT 4
CO 5	Evaluate the measures of sigma scores, standard scores, percentiles and calculation and interpretation of statistical procedures.	BT 5

Detailed Syllabus:

Modules	Topics / Course content	Periods
I	INTRODUCTION TO RESEARCH: Significance, Purpose and Types of Research, Ethics in Research, Plagiarism, Research Design – steps, Sampling Methods and Scaling Techniques, Research Tools and Methodology of Data Collection, Databases in Food Research	12
II	RESEARCH DATA PRESENTATION: Variables in Research and Scales of Measurement, Tabulation of Research Data, Graphical Presentation of Data – use of Excel and Statistical Software, Scientific Report Writing	12
III	RELATED RESEARCH CONCEPTS: Probability – Theoretical and Conditional, Gaussian Curve, Binomial Distribution, Poisson Distribution, Density Functions, Vital Statistics and Life Tables	12
IV	DESCRIPTIVE STATISTICS: Measures of Central Tendency – Mean, Mode, and Mode for Grouped and Ungrouped Data, Measures of Variability – Range, Variance, Standard Deviation and Standard Error, Measures of Relative Positions - Sigma Scores, Standard Scores, Percentiles, Percentile Ranks, Measures of	12

	Relationships – Correlation and Regression Analysis, Measures of Shape – Skewness, Kurtosis, Calculations and Interpretation of Statistical Procedures

Subject Name: Nutraceuticals and Health Foods**Scheme of Evaluation: (T)****Subject Code: FTC154C303****Credit Units: 3-1-0-4****Course Objective:**

The course aims to acquaint students with the concept of functional foods and nutraceutical supplements and to familiarize students with the health benefits related to such products.

Course Outcomes:

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Remember the components of functional foods and foods containing nutraceuticals	BT 1
CO 2	Understand the development in the field of nutraceuticals and nutrigenomics	BT 2
CO 3	Apply knowledge of nutrient effects on molecular processes in the body and the role of phytochemicals in disease prevention and management.	BT 3
CO 4	Analyse the importance of probiotics and prebiotics in human health	BT 4
CO 5	Evaluate the probable prevention and treatment of chronic diseases	BT 5

Detailed Syllabus:

Modules	Topics / Course content	Periods
I	Nutraceuticals: Definition, History, Classification, Market trends, Sources. Demand drivers for health supplements and nutraceuticals in India. Development of nutraceuticals incorporated food products- Tailoring diets for special needs, critical steps, stability, and bioavailability of bioactive substances in food matrices.	9
II	Functional foods: Definition, History, and Types. Health benefits of functional foods and future promises in Indian diet. Future research and development of Functional foods- Qualified studies, modern technologies and appropriate consumer communication. Safety and regulatory aspects of functional foods.	9
III	Probiotics and Prebiotics: Definition, Types, Source and health benefits. Recent advances in probiotics and prebiotics. FAO/WHO/Standards/Guidelines on probiotics and prebiotics.	9
IV	Pigments and Flavonoids: Carotenoids, Curcumin, Terpenes, Allyl compounds for treatment and prevention of chronic diseases-Introduction, mechanism of action Curcumin, Role of curcumin in cancer, CVDs, neurological diseases, pulmonary diseases, diabetes, rheumatic and infectious diseases.	9
Total		36
Pedagogy: Lectures, Assignments, Seminars

SYLLABUS (4th SEMESTER)

Subject Name: Food Additives, Adulteration and Toxicology Scheme of Evaluation: (T)

Subject Code: FTC154C401

Credit Units: 3-1-0-4

Course Objective:

The course aims to acquaint students with the additives relevant to the processed food industry for shelf-life extension, processing support and sensory appeal and to familiarize students with microbial, chemical and natural toxicants and allergens indigenously present and developed during food processing

Course Outcomes:

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Remember the classification and functions of food additives	BT 1
CO 2	Understand the different chemical agents added to enhance the quality of processed foods	BT 2
CO 3	Apply knowledge on the toxicological Evaluation of Food Additives and Adulterants.	BT 3
CO 4	Analyse and comprehend the effects of adulterants and toxic products in foods	BT 4
CO 5	Evaluate the different types and stability of flavour during food processing	BT 5

Detailed Syllabus:

Modules	Topics / Course content	Periods
I	FOOD ADDITIVES AND ADULTERANTS: Definition, Classification and Functions of Food Additives, Types of Adulteration in Food and Methods of Detection, Indirect food additives – intentional and unintentional, Toxicological Evaluation of Food Additives and Adulterants.	9
II	FLAVOUR TECHNOLOGY: Types of Flavours - reaction flavours, flavour composites, Stability of Flavours during Food Processing, Analysis of Flavours, Extraction Techniques of Flavours, Authentication of Flavours	9

III	TOXICOLOGY: Definition, Principles, and Classification of Food Toxicants, Toxicants derived from Plants, Animals, Marine, Algal, and Microbial Sources, Derived Food Toxicants (from processing and packaging)	9
IV	FACTORS AFFECTING TOXICITY OF COMPOUNDS: Manifestation of Toxic Effects - food poisoning and food-borne infections and disease, Methods used in Safety Evaluation	9
Total		36
Pedagogy: Lectures, Assignments, Seminars		

Text books:

2. George AB. 1996. Encyclopaedia of Food and Color Additives. Vol. III. CRC Press.
3. Concon JM. 1988. Food Toxicology - Principles & Concepts. Marcel Dekker.

Reference books:

1. George AB. 2004. Fenaroli's Handbook of Flavor Ingredients. Fifth Edition. CRC Press.
2. Hathcock JN. (Ed.). 1982. Nutritional Toxicology. Vol. I. Academic Press.
3. Madhavi DL, Deshpande SS and Salunkhe DK. 1996. Food Antioxidants: Technological, Toxicological and Health Perspective. Marcel Dekker

Subject Name: Recent trends in Food Product Development**Scheme of Evaluation: (T)****Subject Code: FTC154C402****Credit Units: 3-1-0-4****Course Objectives:**

Ability to generate new ideas and develop innovative food product and Ability to evaluate the acceptability of develop product through consumer feedback.

Course Outcomes:

On successful completion of the course the students will be able to:		
SI No	Course Outcome	Blooms Taxonomy Level
CO 1	Remember the concept and generation of ideas in innovation product development	BT 1
CO 2	Understand the different novel food packaging technologies used in an industry	BT 2
CO 3	Apply the effective active and intelligent packaging system for quality improvement of food products	BT 3
CO 4	Analyse the testing consumer responses to new packaging concepts.	BT 4
CO 5	Evaluate the ability to implement novel modified atmosphere packaging system for fresh-prepared produce	BT 5

Detailed Syllabus:

Modules	Topics / Course content	Periods
I	Innovation product development: Concept, generation of ideas. Desk Research. Screening/appraisal of initial ideas. Detailed study of product, process and market, Planning and developmental activities and evaluating them. Development of prototype product and its testing for acceptance. Development of process and planning for production trials. Planning the test market. Evaluation of test results. Launching of the product. Advertising and marketing plans. Introduction to Consumer Survey, market Survey. Detailed feasibility analysis.	12
II	Novel/new product designing: New Food Product Development (NPD) process and activities, The Stage-Gate model NPD success factors, new product design, food innovation case studies, market-oriented NPD methodologies, organization for successful NPD; Recipe Development; use of traditional recipe and modification; involvement of consumers, chefs and recipe experts; selection of materials/ingredients for specific purposes, selection of packaging material, storage studies, cost effectiveness, nutritional needs or uniqueness; use of novel food ingredients and novel processing technologies.	12

III	Standardization, Scaling-up, and Quality Assurance: Process design and optimization, equipment selection, and establishment of process parameters for ensuring product quality and consistency. Sensory evaluation techniques, laboratory and statistical analysis for product assessment and market comparison. Product stability and shelf-life evaluation, including accelerated shelf-life testing and assessment of sensory changes due to environmental factors. Development of cost-effective and functional packaging systems for maintaining product integrity and minimizing interactions between packaging and food. Regulatory compliance, adherence to food safety standards, and approval processes for standard and proprietary products.	12
IV	Recent advances: 3D food printing technology and its applications, alternative protein sources – air-based proteins and cell-cultured dairy, artificial intelligence in recipe development, sustainable ingredient alternatives, cocoa-free chocolate and plant-based innovations, functional foods enriched with probiotics, vitamins, and minerals, personalized nutrition and AI-driven dietary optimization, advancements in food formulation for health-conscious consumers, emerging trends in sustainable and ethical food production.	12
